## HOUSTON MALLORY

---

The Policing of Flows Enslow Publishing, LLC  
The ocean is full of complex food webs made up of

many different animals fighting to stay alive within this massive ecosystem. Carnivores, herbivores, and other classified creatures are introduced

within the accessible and age-appropriate narrative, which is presented in a conversational tone and creative way. Popular creatures are categorized

separately and given detailed descriptions, which allows readers to expand their knowledge of each animal. Helpful graphic organizers provide additional information. Full-color photographs make this an exciting learning experience for all those interested in expanding their knowledge of the science and webs of marine life. *Animals' Influence on the Landscape*

*and Ecological Importance*  
Springer  
Detailed anatomical illustrations accompany information on the appearance, habits, geographical distribution, and evolutionary changes of the smaller mammals of Kenya, Uganda, and Tanzania.  
Bibliogs  
Rhinos  
Wayland  
Rhinoceroses fight fires, save people from drowning, and assist on the scene of a multi-car

accident.  
Includes a glossary of firefighting lingo.  
**Mammals of Africa: Volume V**  
Heinemann-Raintree Library  
This book synthesises key insights from a century of ecological research and monitoring efforts in one of Africa's oldest protected areas.  
*Rhinoceros*  
Lerner Publications  
Audisee® eBooks with Audio combine professional narration and

sentence highlighting for an engaging read aloud experience! Southern white rhinos are in trouble. For years, a rumor has been spreading that their horns can be used to cure cancer, and poachers have been targeting these gentle creatures. Sandra Markle takes readers behind the scenes to see how civilians, volunteer organizations, and African governments are working together to

protect rhinos. **The Return of the Unicorns** Oxford University Press, USA “This engaging romp will be a great way to initiate conversations about diversity, tolerance, and acceptance.” —Booklist (starred review) In the spirit of favorites like *Stick & Stone* and *Spoon* this warmhearted and hilarious picture book tells the story of a highly unusual group of friends and

is stunningly illustrated by Samantha Cotterill. Meet Hudson, a hippo. Fran, an earthworm. And Jean, a lightbulb. They have one thing in common: a profound appreciation for rhinos. So, they form a Secret Rhino Appreciation Society, in which a key activity it wearing paper horns. (Sometimes this results in a fire. That’s what happens when a lightbulb wears a paper horn.) But when they

meet their first real, live rhino and ask her to do rhino-y things, she doesn't want to charge or snort—she's a gardener! She is not what the society expected, but can they learn to appreciate her for who she is? This funny, character-driven story explores themes of friendship, expectations, and prejudice. *The Secret Rhino Society* Reaktion Books Mammals of Africa (MoA) is a series of six

volumes which describes, in detail, every currently recognized species of African land mammal. This is the first time that such extensive coverage has ever been attempted, and the volumes incorporate the very latest information and detailed discussion of the morphology, distribution, biology and evolution (including reference to fossil and molecular data) of

Africa's mammals. With more than 1,160 species and 16-18 orders, Africa has the greatest diversity and abundance of mammals in the world. The reasons for this and the mechanisms behind their evolution are given special attention in the series. Each volume follows the same format, with detailed profiles of every species and higher taxa. The series includes hundreds of colour illustrations

and pencil drawings by Jonathan Kingdon highlighting the morphology and behaviour of the species concerned, as well as line drawings of skulls and jaws by Jonathan Kingdon and Meredith Happold. Every species also includes a detailed distribution map. Edited by Jonathan Kingdon, David Happold, Tom Butynski, Mike Hoffmann, Meredith Happold and Jan Kalina, and written by more than 350 authors, all experts in their fields, *Mammals of Africa* is as comprehensive a compendium of current knowledge as is possible. Extensive references alert readers to more detailed information. Volume V, edited by Jonathan Kingdon and Michael Hoffmann, comprises 83 species of carnivores, and includes jackals, wolves, dogs, foxes, weasels, polecats, striped weasels, Zorilla, otters, Ratel, fur seals, monk seals, Palm Civet, cats, genets, linsangs, African Civet, hyaenas, Aardwolf and mongooses. The volume is completed with profiles of four pangolins, four zebras and two rhinoceroses. Indian Rhinoceroses Houghton Mifflin Harcourt Provides a wealth of information about the

fascinating diversity of mammals that share our world.

The Great Rhino Rescue Marshall Cavendish Describes the physical characteristics , habitat, eating and mating habits, and the threats they face and what is being done to protect them.

Rhinos Who Rescue National Geographic Books (M) The rhinoceros is a huge animal found in both Africa and Asia. What

food does a rhino eat to grow so large? How many horns does a rhino have? What color is a white rhino? A black rhino? You may be surprised to find out. Read to discover all about rhinoceroses. Mountain Food Webs CRC Press An award-winning author visits the Namib Desert with a group of former poachers, now conservationists, in search of endangered black rhinos that were saved from

extinction by human intervention and cutting-edge conservation techniques. 20,000 first printing. National Geographic Kids Chapters: Rhino Rescue Routledge With their thick skin and pointy horns, Indian rhinoceroses are not to be messed with. They can weigh almost 5,000 pounds and are the second largest land mammal in Asia. Indian rhinoceroses look like modern day dinosaurs.

These animals and their awesome armor provide a hook to introduce young readers to important concepts drawn directly from the Life Science curriculum. The Mammals of the Southern African Sub-region Greenhaven Publishing LLC Rhinos are interesting, fun to watch, and endangered of becoming extinct. This book is first about how scientists study rhinos, and then

information is presented on rhino taxonomy, distribution, ecology, fossil history, behavior, reproduction, and conservation, including poaching. But there is a lot more to rhinos than just the above, there are also sections on rhinos in history, rhinos in art, rhino companies, logos and products, as well as lists of rhino books, toys, and conservation organizations. Endangered Rhinos

Greenhaven Publishing LLC Rhino occupy a unique part of the food chain and wide niches in specific ecosystems in which they have developed their own behaviour patterns and interactions with other species. They form an essential part of the animal kingdom and their loss would have significant ramifications for other dependant flora and fauna. The large numbers of rhino

orphans and the loss of pregnant females are decimating wild rhino populations. This decline is mainly due to poaching for their horns that are made of keratin and which have no proven medical benefit to humans. Greedy markets in China, Vietnam and Yemen, and criminal syndicates offer extremely high prices for rhino horn making it more valuable than gold.

Whilst tackling the poachers head on is essential, it is sadly not enough and vigorous education programmes need to be put in place to inform people of the ecological, economic, aesthetic and touristic value of rhino. This book is dedicated to the plight all rhino species face including museum specimens and fossils. *The Black Rhinos of Namibia* Marshall Cavendish First Published

in 2001. Routledge is an imprint of Taylor & Francis, an informa company. Conserving Africa's Mega-Diversity in the Anthropocene StarWalk Kids Media Written for everyone fascinated by the huge beasts that once roamed the earth, this book introduces the giant hornless rhinoceros, Indricotherium . These massive animals inhabited Asia and Eurasia for more than

14 million years, about 37 to 23 million years ago. They had skulls 6 feet long, stood 22 feet high at the shoulder, and were twice as heavy as the largest elephant ever recorded, tipping the scales at 44,100 pounds. Fortunately, the big brutes were vegetarians. Donald R. Prothero tells their story, from their discovery just a century ago to the latest research on how they lived

and died. Rick the Rhino Ramsey Press Where do over 80 percent of black rhinos live? What is a midden and why do rhinos make them? How many horns does a black rhino have? In Black Rhino, you will find answers to these questions as you learn why this powerful animal needs a lot of help from concerned people so that it does not disappear from this Earth. From 24-hour guards to relocating

these 1-ton animals, conservationists have had to work hard to save the remaining rhinos. As you learn about their long breeding cycle and why some people value their horns, you will better understand how much work still needs to be done. Black Rhino Greenhaven Publishing LLC Describes the physical characteristics, life cycle, behavior, and conservation of rhinos. **Last** Taylor & Francis

For hundreds of years, humans have slaughtered rhinos for their horns. Now all five species are endangered--with some on the brink of extinction. This book looks at the important role of this "mega

herbivore on Earth and how we can help save them from extinction.

### **Mammals of the Southern Hemisphere**

Raintree  
The rhino's horns are so highly prized in many countries that poachers

continue to kill rhinos even though it is against the law. Illegal hunting and the destruction of their habitat have left all five species of rhinos in serious danger of becoming extinct.
