REINA WERNER

American Economics and Politics HarperCollins

This book provides a comprehensive commentary on the UNCITRAL Model Law on International Arbitration. Combining both theory and practice, it is written by leading academics and practitioners from Europe, Asia and the Americas to ensure the book has a balanced international coverage. The book not only provides an article-by-article critical analysis, but also incorporates information on the reality of legal practice in UNCITRAL jurisdictions, ensuring it is more than a recitation of case law and variations in legal text. This is not a handbook for practitioners needing a supportive citation, but rather a guide for practitioners, legislators and academics to the reasons the Model Law was structured as it was, and the reasons variations have been adopted.

Asean's Non-interference Policy Andrews McMeel Publishing

In its last decades, the apartheid regime was confronted with an existential threat. While internal resistance to the last whites-only government grew, mandatory international sanctions prohibited sales of strategic goods and arms to South Africa. To counter this, a global covert network of nearly fifty countries was built. In complete secrecy, allies in corporations, banks, governments and intelligence agencies across the world helped illegally supply guns and move cash in one of history's biggest money laundering schemes. Whistleblowers were assassinated and ordinary people suffered. Weaving together archival material, interviews and newly declassified documents, *Apartheid Guns and Money* exposes some of the darkest secrets of apartheid's economic crimes, their murderous consequences, and those who profited: heads of state, arms dealers, aristocrats, bankers, spies, journalists and secret lobbyists. These revelations, and the difficult questions they pose, will both allow and force the new South Africa to confront its past.

The Times Index Pluto Press (UK)

Modern slavery encompasses human trafficking, slavery, forced labour and domestic servitude. In 2012, the International Labour Organization estimated that there were 21 million victims of forced labour across the world. Our current understanding of the exact scale of the problem is limited. The only systematic means we have for collecting data is the National Referral Mechanism (NRM) to which potential victims of modern slavery are referred. 1,186 potential victims of modern slavery were referred in 2012 - a 25 per cent increase on the previous year. The Government will go forward in three ways: through legislation in this Parliament; through non-legislative action across the country; and through upstream work in source countries. The draft Modern Slavery Bill will: consolidate and simplify existing slavery and trafficking offences; increase the maximum sentence available to life imprisonment; introduce civil orders to restrict the activity of those who pose a risk and those convicted of slavery and trafficking offences; create a new Anti-Slavery Commissioner role to galvanise law enforcement's efforts to tackle modern slavery; and establish a legal duty to report potential victims of trafficking to the National Crime Agency (NCA). The Rt Hon Frank Field MP was

invited to run a number of evidence sessions to gather information and views from a wide range of experts. His recommendations will be fully considered as the Bill and action plan are developed. The action plan will also set out how we will improve law enforcement action in source countries, and take steps towards scaling up reintegration programmes

Apartheid Guns and Money SME

This book paints a vivid picture of Zambia's experience riding the copper price rollercoaster. It brings together the best of recent research on Zambia's mining industry from eminent scholars in history, geography, anthropology, politics, sociology and economics. The authors discuss how aid donors pressed Zambia to privatize its key industry and how multinational mining houses took advantage of tax-breaks and lax regulation. It considers the opportunities and dangers presented by Chinese investment, how both companies and the Zambian state responded to dramatic instabilities in global commodity markets since 2004, and how frustration with the courting of mining multinationals has led to the rise of populist opposition. This detailed study of a key industry in a poor Central African state tells us a great deal about the unstable nature and uneven impacts of the whole global economic system.

The Scott Chronicles Stylus Publishing, LLC

Established in 1970, the PbZn symposium series is considered the leading international technical forum for the lead and zinc processing industries. The PbZn 2020 volume addresses all aspects of current processing technologies for primary and secondary lead and zinc, as well as emerging technologies for both metals.

My Vanishing Country Oxford University Press

The international community has long grappled with the issue of safeguarding the environment and encouraging sustainable development, often with little result. The 1992 Rio Declaration on Environment and Development was an emphatic attempt to address this issue, setting down 27 key principles for the international community to follow. These principles define the rights of people to sustainable development, and the responsibilities of states to safeguard the common environment. The Rio Declaration established that long term economic progress required a connection to environmental protection. It was designed as an authoritative and comprehensive statement of the principles of sustainable development law, an instrument to take stock of the past international and domestic practice, a guide for the design of new multilateral environmental regimes, and as a reference for litigation. This commentary provides an authoritative and comprehensive overview of the principles of the Declaration, written by over thirty inter-disciplinary contributors, including both leading practitioners and academics. Each principle is analysed in light of its origins and rationale. The book investigates each principle's travaux préparatoires setting out the main points of controversy and the position of different countries or groups. It analyses the scope and dimensions of each principle, providing an in-depth understanding of its legal effects, including whether it can be relied before a domestic or international court. It also assesses the impact of the principles on subsequent soft law and treaty development, as well as domestic and international jurisprudence.

The authors demonstrate the ways in which the principles interact with each other, and finally provide a detailed analysis of the shortcomings and future potential of each principle. This book will be of vital importance to practitioners, scholars, and students of international environmental law and sustainable development.

The Art of Advocacy in International Arbitration Springer

This book will help direct mining operations through the use of innovative economic strategies. The text covers what is meant by a cost-effective mining scheme, the economics of information, and the procedures for rational evaluation of uncertain projects.

Polymer Engineering John Wiley & Sons

Polymer Engineering focuses on the preparation and application of polymers in several hot topics such as artificial photosynthesis, water purification by membrane technologies, and biodiesel production from wastewater plants. The authors not only describe the latest developments in polymer science, but also support these experimental results by computational chemistry and modelling studies.

Intelligent M&A John Wiley & Sons

Rapidly rising carbon emissions from the intense development of Western Canada's fossil fuels continue to aggravate the global climate emergency and destabilize democratic structures. The urgency of the situation demands not only scholarly understanding, but effective action. Regime of Obstruction aims to make visible the complex connections between corporate power and the extraction and use of carbon energy. Edited by William Carroll, this rigorous collection presents research findings from the first three years of the seven-year, SSHRC-funded partnership, the Corporate Mapping Project. Anchored in sociological and political theory, this comprehensive volume provides hard data and empirical research that traces the power and influence of the fossil fuel industry through economics, politics, media, and higher education. Contributors demonstrate how corporations secure popular consent, and coopt, disorganize, or marginalize dissenting perspectives to position the fossil fuel industry as a national public good. They also investigate the difficult position of Indigenous communities who, while suffering the worst environmental and health impacts from carbon extraction, must fight for their land or participate in fossil capitalism to secure income and jobs. The volume concludes with a look at emergent forms of activism and resistance, spurred by the fact that a just energy transition is still feasible. This book provides essential context to the climate crisis and will transform discussions of energy democracy. Contributions by Laurie Adkin, Angele Alook, Clifford Atleo, Emilia Belliveau-Thompson, John Bermingham, Paul Bowles, Gwendolyn Blue, Shannon Daub, Jessica Dempsey, Emily Eaton, Chuka Ejeckam, Simon Enoch, Nick Graham, Shane Gunster, Mark Hudson, Jouke Huizer, Ian Hussey, Emma Jackson, Michael Lang, James Lawson, Marc Lee, Fiona MacPhail, Alicia Massie, Kevin McCartney, Bob Neubauer, Eric Pineault, Lise Margaux Rajewicz, James Rowe, JP Sapinsky, Karena Shaw, and Zoe Yunker.

The Rio Declaration on Environment and Development Routledge

"Since 1859, oil has enabled and defined our economic, social and political landscape. Throughout this time, abundant supply ensured low, stable prices and the inner workings of the oil industry remained relatively obscure. Following a century and a half of relative calm, oil prices have become much more volatile as the sustainability and growth of reliable supply sources have been brought

into question. This book provides a guide to oil; from its history, to sources of supply and drivers of demand; from how prices are determined daily in global wholesale oil markets, to how those markets are connected to prices at the pump." -- Book jacket.

Zambia, Mining, and Neoliberalism Walter de Gruyter GmbH & Co KG

Metals in Wastes is an excellent guide for scientists, students, engineers, chemists, and industrial chemists who are looking for knowledge of the main sources of metals in industrial wastes. Metals are valuable materials that can be recycled again and again without degrading their properties. The recycling of metals enables us to preserve natural resources while requiring less energy to process than the manufacture of new products using virgin raw materials. A team of experts reviews the state-of-the-art and provides the readers not only with a comprehensive in-depth overview of the main composition of wastes but also discloses innovative methods which have been applied for recovery of critical and valuable metals in petrochemical industry, rubber, energy and automotive industries. This know-how could be considered as a useful reference tool for moving towards the zero-waste economy. Additionally, the book describes the economic aspects of metals recovery from various sources. This is essential for those already involved in the metals business and also for the financial, investment and advisory community internationally.

Advances in Flotation Technology John Wiley & Sons

Ownership and Control of Oil examines government decisions about how much control to exert over the petroleum industry, focusing on the role of National Oil Companies in the production of crude oil since the nationalizations in the 1970s. What are the motives for which some producing states opt for less and NOT more control of their oil production sector? When can International Oil Companies enter the upstream industry of producing states and under what conditions? The diversity of policy choices across producers provides the stage for this investigation: different theoretical explanations are confronted, with the empirical evidence, with the aim of finally proposing an interdisciplinary framework of analysis to explain who controls oil production around the world. This book is intended for both specialists and general readers who have an interest in the issue of government control of the petroleum industry. Due to its multidisciplinary approach, the book is aimed at a large academic public composed of scholars of Political Science, International Political Economy, Comparative Politics, and Middle East Area Studies. Moreover, this book should be relevant to international consultants, industry professionals and decision-makers in countries assessing their experience with existing control structures as well as the many countries in the process of joining the 'petroleum club' of oil producing nations.

Mr. Humble and Dr. Butcher Simon and Schuster

If you've been itching to convert your craft into a career, your side-hustle into a start-up, or just want to think about work-life balance in a new way, then The Multi-Hyphen Life is for you. In The Multi-Hyphen Life, award-winning British author-podcaster Emma Gannon explains that it doesn't matter if you're a part-time PA with a blog, or an accountant who runs an online store in the evenings—whatever your ratio, whatever your mixture, we can all channel our own entrepreneurial spirit to live more fulfilled and financially healthy lives. Technology allows us to work wherever, whenever, and enables us to design our own working lives. Forget the outdated stigma of "jack of all trades, master of none," because having many strings to your bow is essential to get ahead in the

modern working world. We all have the skills necessary to work less and create more, and *The Multi-Hyphen Life* is the source of inspiration you need to help you navigate your way toward your own definition of success.

New Forms of Worker Organization PM Press

The “delightfully macabre” (The New York Times) true tale of a brilliant and eccentric surgeon...and his quest to transplant the human soul. In the early days of the Cold War, a spirit of desperate scientific rivalry birthed a different kind of space race: not the race to outer space that we all know, but a race to master the inner space of the human body. While surgeons on either side of the Iron Curtain competed to become the first to transplant organs like the kidney and heart, a young American neurosurgeon had an even more ambitious thought: Why not transplant the brain? Dr. Robert White was a friend to two popes and a founder of the Vatican’s Commission on Bioethics. He developed lifesaving neurosurgical techniques still used in hospitals today and was nominated for the Nobel Prize. But like Dr. Jekyll before him, Dr. White had another identity. In his lab, he was waging a battle against the limits of science and against mortality itself—working to perfect a surgery that would allow the soul to live on after the human body had died. This “fascinating” (The Wall Street Journal), “provocative” (The Washington Post) tale follows his decades-long quest into tangled matters of science, Cold War politics, and faith, revealing the complex (and often murky) ethics of experimentation and remarkable innovations that today save patients from certain death. It’s a “masterful” (Science) look at our greatest fears and our greatest hopes—and the long, strange journey from science fiction to science fact.

Comprehensive Action Plans of the Sulu-Sulawesi Marine Ecoregion Juris Publishing, Inc.

Based on the concept of corporate social responsibility, this book analyses modern approaches adopted by mining companies that could minimise negative impacts of mining and enhance positive benefits to corporate stakeholders. Using a case study of two mining sectors (gold and diamond mining) the book evaluates policies and practices of mining companies within four key areas of corporate social responsibility: environmental protection, health and safety, employee relations and community development. Also included is an assessment of three models for community development that are developed within the mining industries: company-led approach, establishment of corporate foundation and tri-sector partnership. The study analyses management of corporate social responsibility issues with specific reference to mining in the Russian Federation and provides a comparison with global mining companies.

Energy technology perspectives Athabasca University Press

The Lead-Zinc 2000 Symposium is the fourth in the series of decennial conferences on the processing of lead and zinc; it is organized by the Minerals, Metals and Materials Society (TMS). The Symposium the culmination of over two years of work that included the preparation of the papers by the authors, as well as the refereeing, proof-reading and indexing by the editors. The proceedings volume contains sixty-four papers which cover all aspects of lead and zinc processing, including the global business trends of the metals, plant operations, new processing installations, emerging technologies and environmental considerations. The Lead-Zinc 2000 Symposium will also honor Dr. T.R.A. Davey for his many contributions to metallurgical science and the industry throughout his distinguished career.

UNCITRAL Model Law on International Commercial Arbitration Society for Mining Metallurgy

Written by today’s leading arbitrators and counsel, this remarkably candid guide provides insight into the practitioner’s approach, conduct, style, and techniques that have proven most effective. While the facts and the law are fundamental, a successful outcome is the product of painstaking document review, witness interviews, legal research, strategizing and focusing the case, and developing compelling written and oral presentations. How to properly perform these tasks is the subject of this book. And where the first edition focused mainly on the cultural differences in advocacy performed in various regions of the world, this new edition expands on this theme by addressing each functional aspect of an international arbitration and the techniques that have been developed for good written and oral advocacy. Intended to assist both the novice in learning the techniques of advocacy, and the experienced advocate in improving his skills, this is an essential reference.

North American Tunneling 2018 Proceedings OUP Oxford

“The richness, clarity and nuances of the structure and methodology followed by the contributors make the book a very valuable tool for students... seeking to obtain a general understanding of the market and how it is regulated.” – Ligia Catherine Arias Barrera, *Banking & Finance Law Review* The fully updated edition of this user-friendly textbook continues to systematise the European law governing capital markets and examines the underlying concepts from a broadly interdisciplinary perspective. The 3rd edition deals with 3 central developments: the project of the capital markets union; sustainable finance; and the further digitalisation of financial instruments and securities markets. The 1st chapter deals with the foundations of capital markets law in Europe, the 2nd explains the basics, and the 3rd examines the regime on market abuse. Chapter 4 explores the disclosure system and chapter 5 short-selling and high-frequency trading. The role of intermediaries, such as financial analysts, rating agencies, and proxy advisers, is described in chapter 6. Chapter 7 explains compliance and corporate governance in investment firms and chapter 8 illustrates the regulation of benchmarks. Finally, chapter 9 deals with public takeovers. Throughout the book emphasis is placed on legal practice, and frequent reference is made to the key decisions of supervisory authorities and courts. This is essential reading for students involved in the study of capital markets law and financial law.
